

Elopak's Closure Offering

Elopak's Closure Offering

Adding consumer convenience to cartons

A good closure capability is essential if a beverage package is to meet today's demanding consumer needs for functionality. With many processing standards and demands for convenience, security and performance, closure choice becomes a key factor in achieving the needs of all sectors in the global market place.

Elopak's closure programme continually develops closure solutions and applicator technology, often in close cooperation with customers, for all product types, sectors and markets.

Elopak closures are available in a range of sizes, pouring performances, opening styles, processing compatibility and colours which all aim to enhance product, brand, quality and the consumer experience.

All variations cater to different consumer expectations, providing flexible solutions in dynamic markets. The closures are designed to meet the needs of many different market segments and together with applicator technology they can be tailor-made for new filling systems or designed as an add-on for existing filling systems.

Applicators

All closure applicators are optional and can be fitted to existing Elopak filling machines. Elopak cartons are designed to be flexible, and a screw cap can be applied to any of our range of packages, including Pure-Pak®, Diamond®, Slim® and Eco™. All filling machines can be modified to enable closures to be added to products.

Elo-Cap™ - Pre-applied closures

The Elo-Cap™ range consists of high performing and secure closures that provide added value to fresh products with a short shelf life, such as pasteurised milk or juice, and to long-life and hot-filled beverages.

Elo-Cap™ closures are applied to cartons that have been manufactured with a through-cut hole. The closure is inserted in the machine by an applicator before filling.

Elo-Cap™ – high secure and functionality

From fresh to ESL, from hot-fill to long-life, and for dairy, juice and water products, through to some non-food applications, the Elo-Cap™ range of closures provide a wide selection of options for all markets. The closures also provide functional benefits, such as wider spouts for advanced functionality and offer suitability for high viscous products. For also available.

All Elo-Cap™ closures include a tamper evident band for consumer safety. A bore seal guarantees leak-tight recloseability.

Pure-Cap™ - Post-applied closures

The Pure-Cap™ range of closures is developed for long-life products and aseptic filling as they require full integrity of the package until opening for optimum quality. They are applied by a mandrel applicator before filling or by a post applicator after filling.

Pure-Cap™ closures include a tamper evident band to indicate when the pack has been opened or tampered with. They are fully reclosable and an integrated bore seal provides a leak-tight seal.

Pure-Cap™ – integrity and performance

The closures are applied to the carton by hot air or ultrasonic welding. A half cut maintains the barrier properties of the carton until consumers open the closure. Then the cutter of the closure pierces the last layer of the carton, and the half cut opens. This breaks the board seal.

Quality assurance and optimum hygiene

All raw materials used, including additives and master batches, are approved for direct food contact and meet the requirements of the relevant European directives and/or FDA. Elopak holds the EK certificate - a third party certification of EU and FDA standards.

All production for Elopak is under supervision according to FDA, BRC or HACCP guidelines.

Performance and consumer benefits

All Elopak closures are designed with convenience and efficiency in mind. They are easy opening yet highly secure caps for all product types and consumer markets worldwide. Development is focussed on consumer demands with more environmental, ergonomic and cost efficient closures offered to support customers in dynamic and evolving markets.

Convenience and security features increase the security and quality of closures to enhance consumer experience and strengthen brand messages, adding value and differentiation in all markets.

Consumers see the simple values of Elopak closures;

- *they are easy to open*
- *they pour without spilling or splashing*
- *they are easily reclosed to keep products fresh*

Elopak's closure programme offers highly hygienic solutions to maintain safety and quality standards.

ELOPAK delivers the best packaging solutions for premium brands, enhancing and enriching consumer experience through functional, emotional and environmental benefits.
